# PREMIUM CBD GENETICS

# IT ALL STARTS FROM GRAIN

Genetics is the cornerstone of every successful CBD farm.

So, we're glad we met.

At EcoTrio Labs, we keep it simple — a focused collection of premium CBD genetics. Chosen for uniformity, yield, and irresistible aromas. Designed for growers who value consistency, resilience, and results.

From biomass powerhouses to boutique-quality flowers, every variety is bred to perform.

**Because great harvests don't happen by chance — they start here.**

# A FEW. BUT PERFECT.

*Meet our genetics*

When breeding or producing seeds, we have you — the cultivator — as our main focus.

We breed for uniformity and stability, so you get a predictable crop.

We breed for optimal cannabinoid potential and exquisite aromas, so your final product is sought after by your customers.

We breed for ideal morphology, so you achieve higher yields, with plants that have strong taproots and a structure able to withstand weather challenges.

We produce sexually stable seeds, so you don't face unpleasant surprises in your fields.

We produce high-quality seeds, so your plants can thrive under weather stress and resist diseases.

...And this work takes generations.

This variety is officially listed in the EU Common Catalogue of Varieties of Agricultural Plant Species, with THC levels below 0.3%.

Our improved Kompolti, carefully selected by EcoTrio Labs, delivers uniform structure, vigorous growth, and consistently high yields — season after season. It's a dependable performer for both large-scale hemp fields and small, specialized farms.

The selected phenotype reaches CBD levels >8% — well above the industrial hemp average. Expect dense, resin-rich flowers with a bright citrus aroma and gentle floral notes — a profile prized by growers and loved by end consumers.

<b>TOTAL THC*</b>	0,3	<b>YIELD**</b>	up to 600 g/plant (flower) up to 3 t/Ha (biomass)
<b>TOTAL CBD*</b>	8-12%	FLOWERING CYCLE	7-8 weeks
<b>RATIO</b>	1:28	FLOWER	dense, resinous, medium/large
<b>FEMINIZATION RATE</b>	99,9%	RECOMMENDED PLANTING DENSITY	3500 to 7000 plants/Ha
<b>GERMINATION RATE</b>	>95%	HARVEST	End of September/Beginning of October (depends on climate zone)

\*Cannabinoid content may vary depending on climate and cultivation conditions.

\*\*Yields vary depending on cultivation conditions (e.g., vegetative stage duration, fertilization, climate, planting density, and pruning).

A carefully crafted hybrid, CARAMELO brings together the finest traits of its lineage: the native "Sweet" de Georgia, Fruit Cake CBD, and EU-certified Kompolti.

It captivates with an intensely sweet fragrance — caramel layered with fruity and spicy notes — a profile our testers call unique.

This aroma comes from a rare terpene combination: Geraniol, Guaiol, Nootkatone, and Linalool, lifted by fresh  $\alpha$ -Pinene and deep  $\beta$ -Myrcene.

Adaptable to a wide range of climates, even the most demanding, CARAMELO produces dense, resin-rich flowers — a standout for both growers and connoisseurs.

<b>TOTAL THC*</b>	0,3%	<b>YIELD**</b>	up to 600 g/plant (flower) up to 3 t/Ha (biomass)
<b>TOTAL CBD*</b>	8-12%	<b>FLOWERING CYCLE</b>	7-8 weeks

A versatile, high-yielding CBD variety, FRUIT CAKE was born from Cherry Pie, Harlequin CBD, and EU-certified industrial hemp. Carefully stabilized over many generations, this phenotype delivers uniform plants with consistent and dependable traits.

FRUIT CAKE stands out for its strong structure, generous yields, and wide adaptability — making it a favorite among farmers in different climates and conditions. Its captivating fragrance blends the richness of a fruitcake with a refreshing mint undertone. Farmers especially value FRUIT CAKE — dense, aromatic, and rich in sparkling trichomes — for its proven ability to deliver outstanding, boutique-quality resin.

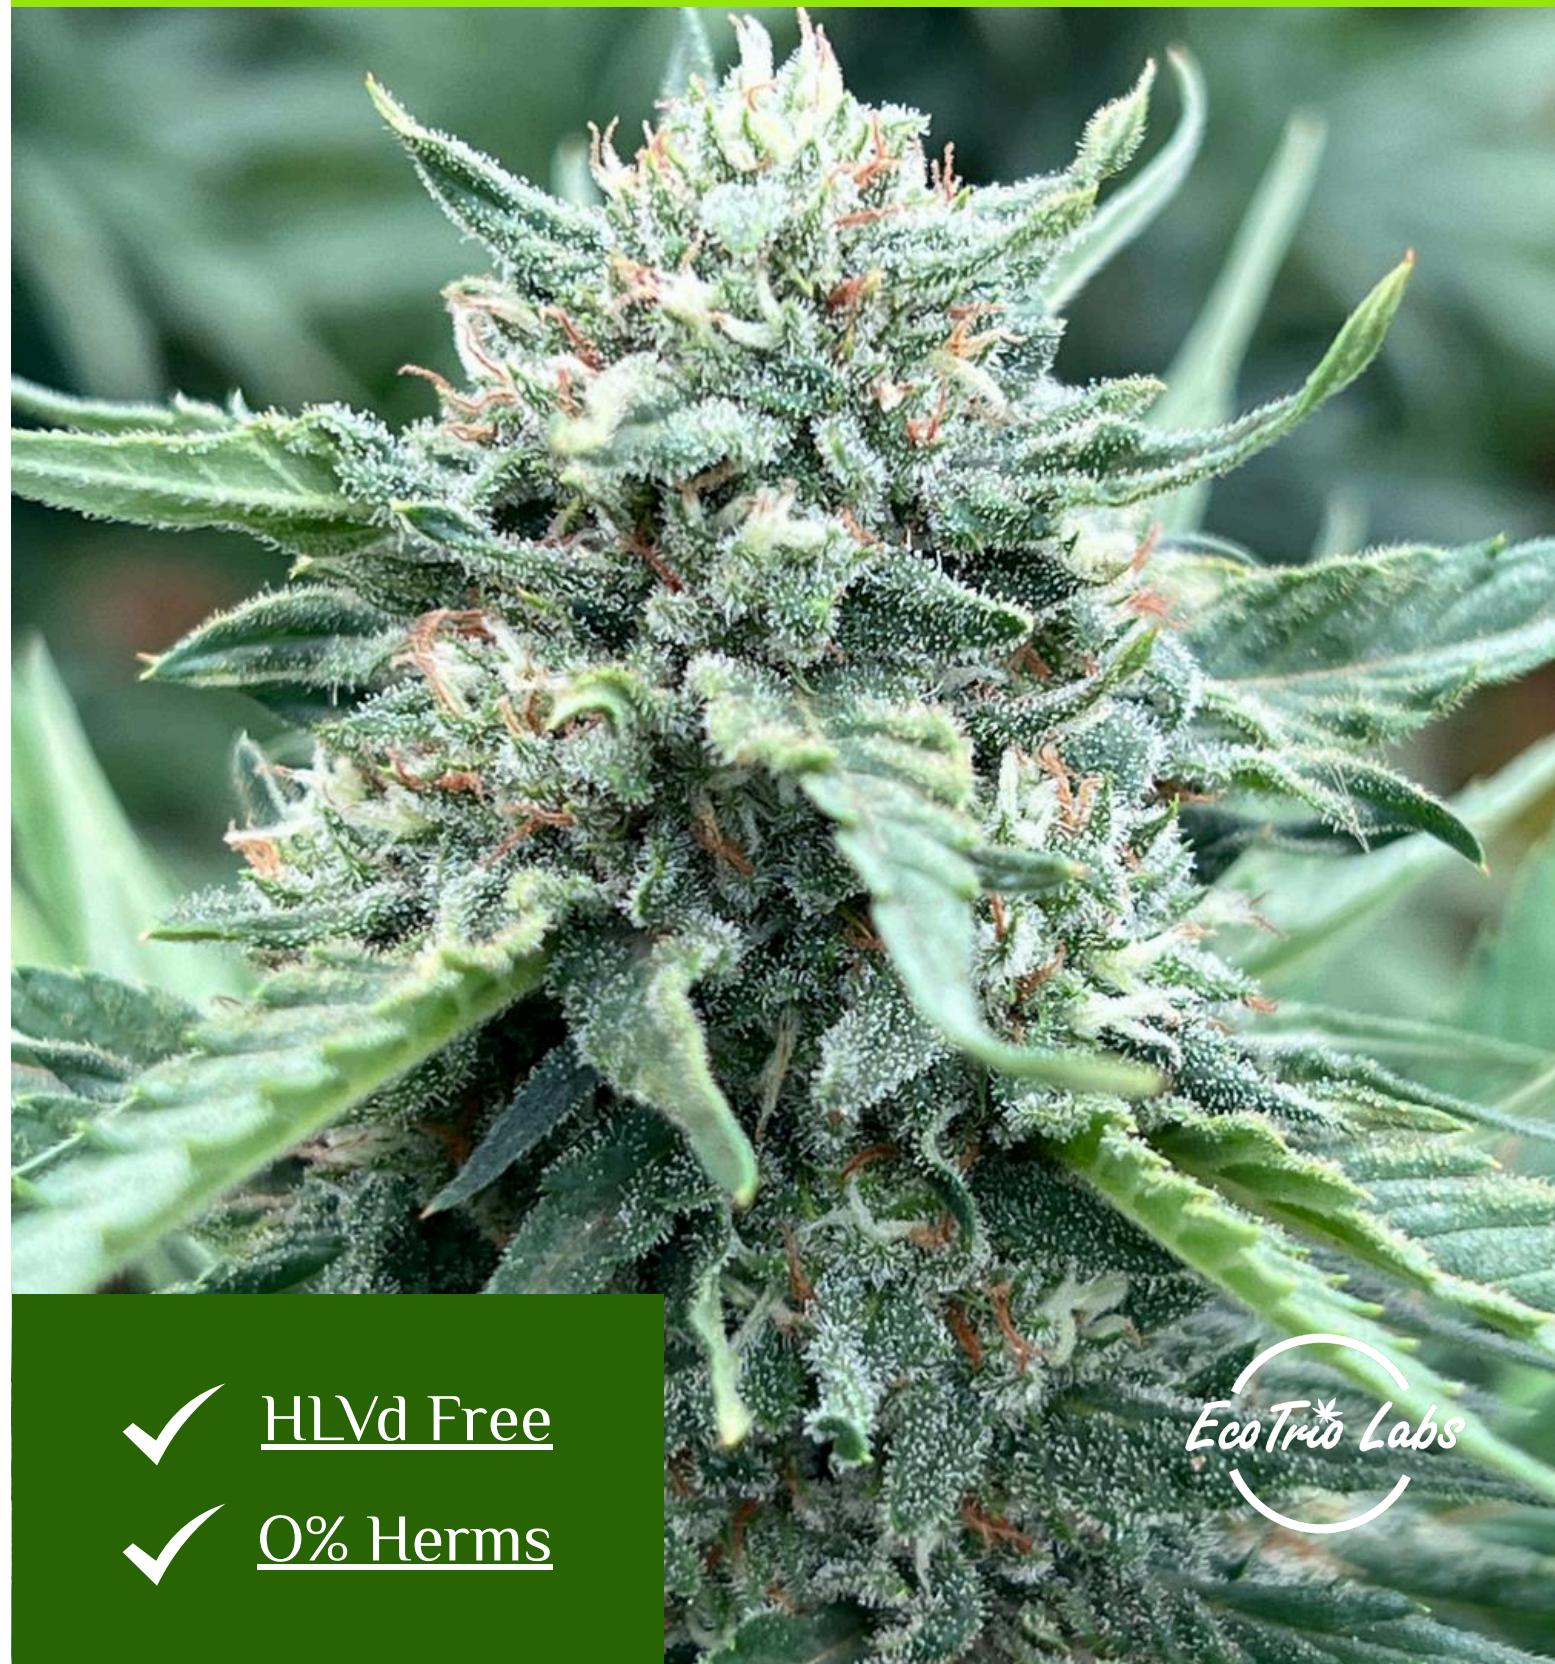

<b>TOTAL THC*</b>	<1%	<b>YIELD**</b>	up to 700 g/plant (flower) up to 3,5 t/Ha (biomass)
<b>TOTAL CBD*</b>	up to 16%	<b>FLOWERING CYCLE</b>	7-8 weeks
<b>RATIO</b>	1:25	<b>FLOWER</b>	dense, resinous, medium/large
<b>FEMINIZATION RATE</b>	99,9%	<b>RECOMMENDED PLANTING DENSITY</b>	3500 to 7000 plants/Ha
<b>GERMINATION RATE</b>	>95%	<b>HARVEST</b>	End of September/Beginning of October (depends on climate zone)

## L'EPIQUE GARDEN

*Commercial grower, France, Lyon*

"Caramelo is a beautiful strain — robust and fairly easy to grow. Very strong and resistant, it produces nice, dense flowers with a unique sweet and fruity smell. A great strain for those who love hunting for beautiful things!"

## CAN HARMONY

*Large scale CBD cultivator, Morocco*

"We had the opportunity to cultivate the Kompolti variety offered by Eco Trio Labs, and the results far exceeded our expectations. The germination rate was exceptional, around 98%, a sign of rigorous selection and impeccable seed quality. The CBD content showed a high and stable level, perfectly suited to the requirements of the wellness market. Moreover, the notable resin content makes this variety ideal for quality extractions. We strongly recommend Kompolti seeds from Eco Trio Labs for any commercial CBD cultivation,. A reliable option for producers seeking consistency, quality, and support!"

# ABOUT US

EcoTrio Labs, S.L., based in Spain, is a company specializing in the research and production of high-quality CBD seeds, being one of the few producers authorized by the Spanish government. We are firmly committed to the highest quality standards, striving to become one of the leading European providers of premium CBD genetics.
